

Vibe Bot

Your portable, in-room AI teammate that turns conversations into outcomes.

What is Vibe Bot?

Vibe Bot is a physically present, in-room AI system with in-device intelligence that listens quietly to live conversations, preserves shared context, and makes what happens in the room usable after the conversation ends – so teams can continue work without restarting or re-deciding.

What Vibe Bot enables?

Clarity Without Distraction

Listens quietly in physical spaces without requiring explicit recording actions or workflow changes.

Faster, More Confident Follow-Through

Identifies decisions and commitments live, preserving outcomes without reconstruction.

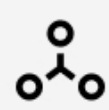

Fewer Re-Decisions, Less Rework

Captures why decisions were made, preserving rationale so teams don't lose intent.

Work Continues After the Conversation

Conversations become structured artifacts that teams can reference immediately without chasing notes.

Shared Understanding Across Teams

Carries context forward and surfaces discussions, reducing dependency on individual memory.

Simpler Rooms, Lower Overhead

Plug-and-play deployment for physical spaces with predictable, session-based behavior.

Where Vibe Bot fits best?

Executive office

Your context-aware AI assistant - Vibe Bot draws on your past meeting history to give answers grounded in your team's real context.

Hybrid meetings

Listens, transcribes, summarizes. Vibe Bot captures what was said and why, so your team continues forward without re-explaining.

Offline conversations

Turn conversations into shared team context. Ensure the rest of the team knows exactly what was decided, even if they missed it.

Built for teams who can't afford to lose momentum

“

I go phone call to phone call and can't keep up with notes. Context gets lost before I can act on it. Just summarization by itself gets me from point A to point B. Now decisions stay captured, and I don't have to re-explain everything to my team.
